The present invention describes recombinant Hepatitis C virus (BCV) antigens (I). (I) is useful as a reagent for the detection of antibodies and antigen in body fluids from individuals exposed to HCV. The HCV assay uses reliable and efficient reagents and methods to accurately detect the presence of HCV antibodies in samples obtained from individuals answerted of leving HCV infection. AAR32218 to AAR32181 to AAR51379 and AAR6901 to AAR69032 represent sequences used
                                                                                                                                                                                                                                                                                                                                                                                                               Dovare 3G. Human, secreted protein, immunestimulant, immunesuppressant; virucide, antibu-1-131, antifusjal, vyl static antialinematic; dermatological, antidaotic; antiastimulatic; antialinematic; protocodide, antidyrold, immune deficiency; severe combined immunedeficiency; SUID: infection, HVV, hepatitis, malaria; autoimmune disorder; systemic lupus; connective tissue disease; multiple sclerosis; erythematosis; rheumatoid arthritis; autoimmune pulmonary inflammation; astima; Guillain-Barre syndiome; autoimmune thyroidills, myastboid atmais autoimmune thyroidills, myastboid atmais autoimmune thyroidills, and atmais autoimmune thyroidills, and atmais antidisease; autoimmune inflammatory eye disease; allergy.
C-terminal region) where one or two regions among the above three regions is selected from the three hyaluronate synthase (HAS) modified proteins HASI, HAS2 and HAS3 (e.g. a protein made from HASI amilio acids 1 to 71; HAS2 and HASI amino acids 410 to 583). The protein is useful as a research reagent for blochemical research and acidical development. The invention provides a HAS modified protein of increased or lowered activity. ANY 9127 to ANY 9142 represent specifically claimed examples of recombinant proteins from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                       N.B. The present sequence is not given in the present specification, but is derived from sequences given as specified in the claim.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotides encoding secreted proteins, which may have e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY78137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a recombinant protein which consists of three earlieous regions (N terminal region, internal region and characteristics) where he of two regions and above three regions is selected to the other way industrial espiratuse (RAS) modified from the three Papia regions as selected to the other first made to make them HASI amino acids from the transfer of the HASI amino acids to the ASI amino acids and the protein is useful as a research reasont for biochemical research and medical decolegement. The invention provides a HAS medified practein and increased or tivity, AAV28127 to AAV2413. Tepresent

proteins HASI, HASZ and HASS (e.g. a protein made from HASI amino acriss 1 to 71, HASZ amino acids 52 to 379 and HASI amino acids 410 to 787). The protein is useful as a research reacent for therefore research and medical development. The invention prevides a HAS meditied protein of increased or lowered acidity, AAY79127 to AAY7H12 represent specifically claimed examples of recombinant proteins from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A hyaluromate synthase modified protein— useful as a research readent for biochemical research and medical development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a recombinant protein which consists of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      three continuous regions (N-terminal region, internal region and
C-terminal region) where one of two regions among the above three
regions is selected from the three hyaluromate synthase (HAS) meditied
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Monse, murine, hydluronate synthase, medication, Hast, Hast, Hask, tesearch reasent, biochemical research, medical decologment; chimoris:

three continuous regions (N-terminal region, internal region and C-terminal region) where one or two regions among the above three regions is selected from the three hydraconate synthase (HAS) modified proteins HAS1, HAS2 and HAS3 (e.g. a protein made from HAS1 amino acids 1 to 71, HAS2 amino acids 52 to 379 and HAS1 amino acids 410 to 589).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A hyaluromate synthase modified protein – useful as a research reagent for biochemical research and medical development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a recombinant protein which consists of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The protein is useful as a research reagent for biochemical research and medical development. The invention provides a MAS modified protein of increased or lowered activity, AAY78127 to AAY78143 represent specifically claimed examples of recombinant proteins from the present
                                                                         and medical development. The invention provides a HAS modified protein of increased of lowered activity. AAY78127 to AAY78142 represent specifically claimed examples of recombinant proteins from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse, murine, hyalaronate synthase, modification: HAS1, HAS2, HAS3, research respent, biochemical research medical development, chimeric.
to 71, HASS amino acids 52 to 379 and HASI amino acids 410 to 583).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Caps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N.B. The present sequence is not given in the present specification,
                                                                                                                                                                                                                                             N B The present sequence is not given in the present specification, but is derived from sequences given as specified in the claim.
                                           The protein is useful as a research reagent for biochemical research.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant chimeric hyaluronate synthase modified protein #16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         but is derived from sequences given as specified in the claim.

The present invention describs a recombinant protein which consists of three continuous regions (N-terminal region, internal region and collecterminal regions). Where the collections and regions among the above three regions is selected from the three hydriconate synthase (RAS) modified proteins HAS1, HAS2 and HAS3 (e.g. a protein made trom HAS1 amino acids 1 to 71, HAS2 amino acids 52 to 379 and HAS1 amino acids 4 for to ^{\rm F}). The protein is useful as a research reason to biochemical research and medical development. The invention provides a HAS modified protein of increased or lowered activity, AAY78127 to AAY78142 represent aggregifically claimed examples of recombinant proteins from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A hydruronate synthase modified protein—aseful as a research reaers) for biochemical research and redical development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse, murine: Ayaluronate synfasse; meditication: HANE: HANE: HANE: HANE: HANE: HANE: HANE: Research deselopment; chimeric.
Mouse; murine; hyaloromate synthase; moditication; HAS1; HAS2; HAS3; roscareh reagont; biochemical research; modical development; chimetre.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N.B. The present sequence is not given in the present specification. but is derived from sequences given as specified in the claim.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant chimeric hyaluromate synthase moditied protein #14.

three continuous regions (N-terminal region, internal region and creation) where one or two regions among the above three regions is selected from the three hydrirenate synthase (BAS) modified proteins BASI, BASZ and BASS (o.g. a protein made from BASI amino acids 1 to 71, BASZ amizo acids 52 to 379 and BACI amizo acids 410 to 587). The protein is useful as a research reagent for biochemical research and medical development. The invention provides a BAS modified protein of increased or lowered artivity. The present acquence represents mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A hyaluronate synthase modified protein – useful as a research readont for biochemical research and medical development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a recombinant protein which consists of

HA can be used to treat arthritis or perforated car drums, protect eyes during susperly, deliver ands, prevent post-operative scarring or addression formation, heal wounds and perent restenois following balloon angioplasty. Modulation of HA production in vivo may be useful in, of Chance disease, mesothalional, Wilm's tumour and outdoms associated with inflammation of lung and Eidney, all of which are associated with elevated levels of HA in tissues or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0.5%, Score 59; DB 21; Length 552;

It is the polypoptide sequence encoded in the combined open reading frames of the hepatitis C virus (HCV) cDNA of clones 35, 36, 81 and 32. It is an epitope, portions of Which could be used as Emmunoassay reagents and varyings and to generate and inclinative aseful in diagnosis and passive immunotherapy for HCV infection/uon-A, non-B hepatitis.
The sequence is encoded by the combined open reading trame of hepatitis C virus cDNA (see AAN90310). These artigens react with antibodies in patients with non-A non-B hepatitis (NANBH). They can be used to diagnose HCV-induced NANBH, to raise antibodies for immunoassay or treatment, or to produce vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptide encoded in the combined open reading frames of clones 35,

The invention relates to a novel system for producing pelykethes particularly 12., 14. and 16-membered ring macrolides from a desired starticularly 12., 14. and 16-membered ring macrolides from a desired startic unit. The biosynthesis of polyketides is initiated by a group of chain-forming enzymes known as polyketide synthases (FKSs) which are multienzyme complexes consisting of a set, or module, of enzymes which catalyse polyketide chain extension. The system of the mornally possess them, thereby controlling the starter units used. The normally possess them, thereby controlling the starter units used. The confidence and a controlling malany, a substituted malany is substituted malany. The sidure for transfer to a chain extension module. The substituted actly residue for transfer to a chain extension module. The substituted actly residue for transfer to a chain extension module. The substituted actly residue for transfer to a chain extension module. The substituted actly residue for transfer to a chain which effects domain is preferred any transfer and this site, may provide the domain, and an acyl carrier protein domain (AFF). The Relates and this site, may provide the domain, and the active site, and the invention are used to produce polyketides, particularly 12., 14. and 16-membered ring produce polyketides, particularly 12., 14. and 16-membered ring and a cratter units, or with unusual starter units, which minimises the formation of by-produces containing a different contact or propionate) starter units, or with unusual starter units, and the contact or propionate or 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           andesired or different starter units, and also allows the incaperation of unusual starter units, the system allows the identification of polykerides which may have exhanced properties or profess no make bioactivity, sequences AAV77259-Y77288 represent PKS CLF or KS domains of a variety of actibomycetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polyketides which minimises the formation of by-products containing an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14 member macrolide, PKS; antibioties granations, polyketide synthase,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        starter unit. The polyketides prediced have use as peténtial anthelminthies, insecticides, immunosuppressants, antifungals or antibacterials. The present invention provides a system for preducing
                                                                                                                                                                                               Novel methods for preparing new variant polyketides, for use as anthelminthies, insecticides, immunosuppressants, antifungals or antibacterials
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0.5%; Score 59; DB 21; Length 421;

Purified hepatitis Coting (HUV) and parified or recombinate HCV nucleic acids (NAs), considing HCV polynuclectides or epitopes, and polypetides are claimed. HCV is a cansative agent of non A, non B hepatitis (NANHH). The NAs may be used to design phose for defin, of HCV NAs in samples. The polyhebitism is a familiar of the polyhebitism is because an immunocherapy. To produce antibodies useful for diagnosis and passive immunocherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein Identification; signal transduction puthway, metabolic pathway,

The sequence encodes antiquens which react with antibodies in particuls with ten A Lou-B hepatitis (NANRH). The polypeptides are used to disturce to face first for formal and the first sequence of the polypeptides of immunosesay or frontier for produce vaccines. The regions show the SQLO terminal, on adaptor, the NANBH polypeptide, and an extra sequence resp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence is a fragment of the sequence given in BP-418216. Pragments of the HCV C-100-3 construct react specifically with antibodies to hepatitis C virus. These peptides are useful as assay reagents for diagnosis of HCV infection, allowing a decrease in talse positives of known methods. DNA sequences encoding the peptides are useful as hybridisation probes for detection and/or determine of HCV. Antibodies raised to the peptides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Open reading frame of the hepatitis C virus C-100-3 construct.

                                    01 - AFR
has been modified using the BepMi excision linker CA-3 which is one of a group of linkers designated blacks.

Within the scope of the hyvantion, this sequence was used to within the scope of the hyvantion, this sequence was used to illustrate a novel mathet of meditying PNA. PNA libraries expressing these modified polypoptides can be used to analyse the relationship between structure and function. Modified beta-lactames inharries can be used to determine the susceptibility of a particular antibiotic to hydrolysis ic. neatralization by mutant engines. Since all possible combinations of mutations were represented within the scope of the invention a meaningful sample could be achieved. The method of the invention allows the neasurement of successful transformants which contains a mitation linker, to determine the used to calculate the present in the library. This can then be used to calculate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein identification, signal transduction pathway, metabolic pathway, hybridisation assay, genetic mapping, gone expression control, promoter;
                                                                                                                                                                                                                                                                                                                                      probabilities that the most and the least common codon combinations are present in the library. The libraries can also be used to produce sets of modified polypeptides such as bronnenss, eq. human growth hormone, in order to detect and anlyse structure/function relationships.

The present invention describes polymorlectides, such as complete chNA sequences and/or sequences of genomic DNA enempassing complete across, political and general increases the finally referred to the assequence-determined DNA transments (SDSB). Their work plants and Arabidopsis thatham. The SDBs are promoters, structural across, untranslated regions (UTRS), or 3' termination sequences. They can be used for expressing a gene product and controllind expression of a target gene, either as a promoter, a structural gene, an OHR or as a 3' termination sequence. They are also useful as tools for generic mapping, and identification of a particular individual, lant or terminating a group plants with a common trail. AAASH4 to AAASH4 and AABA465 in AAASH4 in the polymorphical in the polymorphical by them given in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAB24904
                                                                                            AAY37675
                                                                                                                                                                   This sequence represents a human hyaloronan synthase (HOEFCII). HOEFCII polypeptides and polynucleotides are useful for diagnosing susceptibility to diseases by detecting mutations in the HOEFCII gene using probles containing the HOEFCII mutations in the HOEFCII gene using probles associated with HOEFCII matatace by determining HOEFCII polypeptide lovels. HOEFCII polypeptide to screen for agonists and antaquists which bind HOEFCII polypeptide by observing the binding, or stimulation or inhibition of HOEFCII activity. These can be used in treatment to activite (agonist) or inhibit (autaponist) HOEFCII activity in addition to direct administration of antisense sequences to prevent expression, or HOEFCII polypeptides to treat conditions associated with a lack of HOEFCII probein. Gene therapy may also be used to affect endomine and HOEFCII probein. Gene therapy may also be used to affect endomine and useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for inducing an immune response to immunise and prevent discases, and for isolating HeBFCII clones or parity, jug HEBFCII polypeptides by alfinity, chromatography, HOBFCII polypeptides on the administered directly or as a various to inconduct against disease. Diseases diagnosed, prevented or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     treated include chronic renal failure, inflammatory discuses, myocardial ischemia, cancer, rheumatoid arthritis and cirrhotic liver disease. The HOBERGI polypeptide is also useful for mapping the gene to a chromosome,

of Chlanydia trachomatis (see AAED1425). The polypeptides can be used as vaceines against Chlamydia trachomatis Antisonse and thrown sequences can also be used to control growth of the microordanism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY36754 Y37949 are encoded by open reading frames (ORFs) of the genome
                                                                                                                                                                                                                                                    Vaccine, eye disease, conventional trachema; nonendemic trachema; paratrachema; inclusion conjunctivitis; qenital disease; perihepatilis; nongomococcal uretritis; epidymitis; cervicilis; salpingitis; batthelinitis, parametath; venoreal lymphegranulematesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diseases such as conventional trachoma, nonendemic trachoma, paratrachema, and inclusion conjunctivitiss quental diseases such as nongeneococcal urctritis, epidymitis, cervicitis, appinglis, perihepatitis, appinglis, pneumopathy in breast leading infants: and venereal lymphogramicanis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             :

Atabidopsis (fallens, the SDEs are premited as structural across, untranslated regions (UERs), ct of termination sequences. Incy can be used for expression a gene product and centrollica expression of a target gene, either as a prometer, a structural above, an UER of as of fermination sequence. They are also useful as fools for genetic mapping, and identification of a particular individual plant or for clustering a group of plants with a common trait. AAA784 to AAA386, and AAA4665 to AAB25099 represent the specifically claimed polynocleotide sequences and polypeptides encoded by them eiter in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence is the peptide encoded by the confised open reading frame of hepathitis C virus (BCV) cDAAS in closes of and F (see AANT E). The polypeptides are used to distincts Builder all NANEH, to take antibodies for immanoassay of freatment, of to produce vareines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hepatitis C virus gene : used for produ. of polynometeoride probes, polypeptide(s) and antihodies for diagnosis, presention and treatment

It is encoded in the open reading trame of a composite necessition energy and proposed from overlapping hepatitis ? Virtuas (HV) cMAN in electors 81. 1-2, and 91, isolated using a synthetic sequence equivalent to a transment of HCV cDNA in clone 5-1-1. It is an epitope, portions of which could be used as immuneasing readents and vaccines and to accorate antibodies useful in diagnosis and passive immuneatherapy for HVV infection/from A, non B hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protein identification; signal transduction pathway; motabodic pathway;
